

DP ATHLETE EXTRUDED FEED

DP ATHLETE is designed to meet the specific nutritional needs of horses with very high energy requirements.

DP ATHLETE is used for all sports and race horses during training and competition periods.

CHARACTERISTICS

DP ATHLETE is produced by means of an extrusion process which offers horses perfectly digestible nutrients (starch, cellulose and protein) with a fully preserved fat content.

Rich in vegetable oil, it increases the energy content of the feed ration without the harmful effects of starch, while limiting lactic acid production.

Rich in unsaturated fatty acids, DP ATHLETE enhances the availability of fat and exerts a protective function on cell membranes.

Its selenium, vitamin E and essential amino acid content help maintain tendon and muscle integrity.

Through its concentrated and highly digestible nature, DP ATHLETE provides relief for horses fed large rations.

INGREDIENT ANALYSIS (% GROSS KG)		ADDITIVES PER KG		NUTRITIONAL VALUES
Crude protein	14 %	vit A	25 000 u.i	EFU : 1,25
Fat	14 %	vit D3	2 500 u.i	EDNM : 120
Cellulose	3,5 %	vit E	200 mg	
Lys	0,58 %	Choline	2 000 mg	
Méthionine	0,28 %			

INSTRUCTIONS FOR USE

Horses during training and competition periods:

1-2 kg/day/horse 30 days before and at the start of competing

Improving form, elderly horses and convalescing horses:

0.5-1 kg/day/horse while improving form

Stallions:

1 kg/day/horse 60 days before and during the servicing season

Brood mares, inadequate lactation:

1 kg/day/horse for the last 3 months of gestation and the first few months of lactation

Day	1-3	4-6	7-9	10-12	13-15	16-18	19 and onwards
kJ/day	0,250	0,500	0,750	1,000	1,500	1,750	2,000
